

## Crane Wheels

### **Description**

The Crane wheels are important components used for the traveling of the bridge or gantry crane and the running of the trolley.

The wheel is made of ZG430-640 cast steel or the ZG-50SiMn low alloy steel, hardening depth of the wheel tread part will not lower than 20mm.

### **Specification**

Regarding the ZG430-640 cast steel wheel, hardness of the rolling surface is about 300-350HB, regarding ZG-50SiMn, it is about 420-480HB.

Mechanical property, accuracy and roughness of material accord with JB/T 6392-2008 rules.
