

Grab Bucket

Description

Single-rope grab

Single rope grab is only applied to the crane with a lifting rolling drum. Switching mechanism is novel and is operated freely when lifting weights. It is used on the ground or under the water.

Four-rope grab

Four-rope grab mainly matches with overhead cranes or gantry cranes. It grabs all kinds of materials to load, unload, transport. We can design grabs with tooth, parallel girder opening and working underwater etc. according to customers' requirements.

Electric hydraulic grab

Electric hydraulic grab adopts comprehensively electricity, hydraulic, mechanical technology with high degree of automation, strong grabbing force and energy-efficient which is an ideal tool to lift iron, steel and ore materials etc.

Advantages

1. Heavy Duty and Highly Efficient
2. Suitable for any environment
3. Long Life Span: 30-50years
4. Reasonable structure and strong rigidity
5. Frequency conversion speed control
6. Cabin control or remote control

Specification

Capacity: 0.5~20 CBM

Material: Q235B/Q345B

Industrial voltage: Customized

Video outgoing-inspection: Provided

OEM: Available

Packaging Details: Packed by high quality plywood box
