

Wire Rope

Description

Wire Rope is applicable for Overhead Crane, Gantry Crane, container cranes, shore crane, etc. Crane wire rope is constituted by steel wire, rope core and grease.

Advantages

- 1: High strength with more than 1770Mpa tensile strength, large capacity, strong overload capacity, good elasticity, impact resistance and light self-weight.
2. Crane Wire Rope has good flexibility, stable operation and low noise during high-speed movement. Because it needs to be wound on multiple layers on the reel, it should have good bending fatigue performance.
3. It is reliable in work and will not break suddenly. This is a necessary condition for lifting and safe work.

Specification

Wire Gauge: 1-30mm

Tensile strength: 1570Mpa-2160Mpa

Tolerance: $\pm 5\%$

Packaging Details: In rolls
